IsyLock V1.0.13

Summary

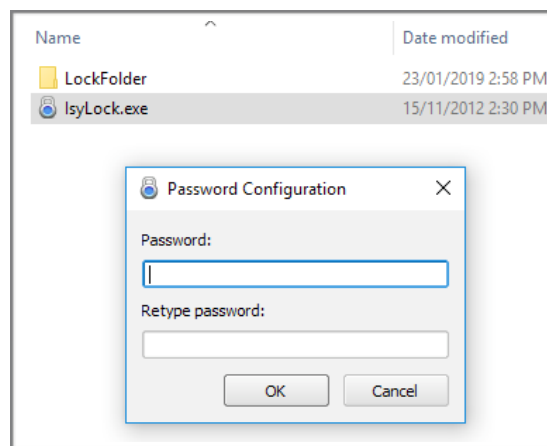

IsyLock is free software for windows. It can be used to lock and hide folders.

Supported OS:

- Windows 7
- Windows 8
- Windows 10

Step 1: First run

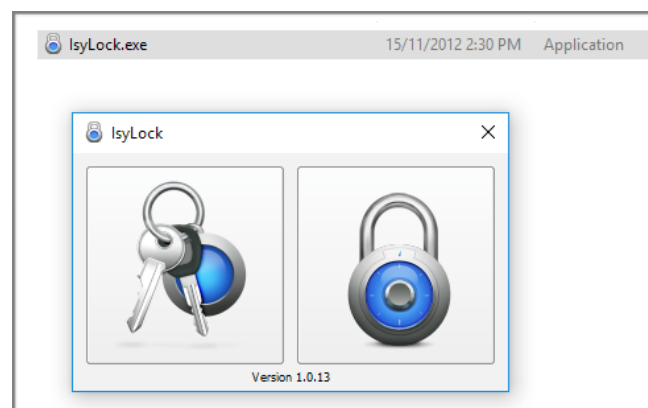

1. Since there is no installation required, you can add IsyLock.exe file at any directory that you required. When first run (and there is no hidden "LockFolder" located in the same directory), the application will auto create a folder called "LockFolder".

2. Next, configure your password.
3. The auto-created "LockFolder" folder can be used to store any important document and files.

Step 2: Lock folder

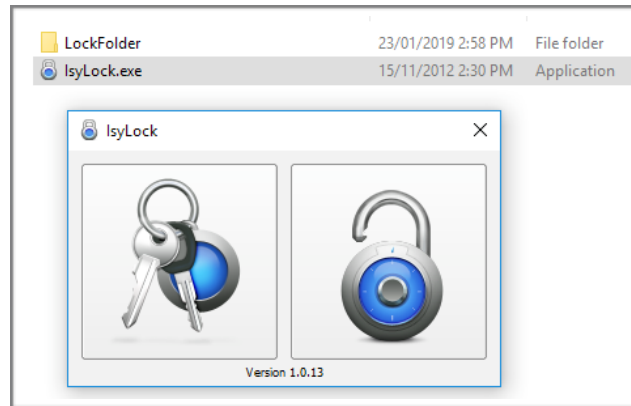

1. Simply run IsyLock.exe and click the lock button.

2. "LockFolder" which is located in the same directory as IsyLock.exe will be lock and become hidden.

Step 3: Unlock folder

1. Run IsyLock.exe and click unlock button. If there is no existing hidden lock folder detected, the software will ask to conduct procedure in **Step 1**.
2. You will be prompt to enter a password.

3. If successful, "LockFolder" will appear and you can access the content inside that folder.

Extra: Change password

1. Make sure your hidden folder is unlocked.
2. Click reset password.
3. Enter new password
